(57) **ABSTRACT**

A monitor with a large screen is provided at the back of the camera. In the recording mode, a preview image or a captured image is displayed in a part of the monitor where there is little possibility of being covered by the hand of the operator. In the reproducing mode, a reproduced image is displayed on substantially the entire screen of the monitor. A touch panel is provided over the monitor, and operation buttons such as a zoom operation button and an exposure correcting button are displayed on a part of the monitor where no image is displayed in the recording mode. Therefore, the part of the monitor can also be used as a camera operational part.
